PROFESSIONAL SUMMARY

Final year BTech Cybersecurity undergraduate with hands-on experience in SIEM engineering, threat detection, brute-force attack simulation, and SOC lab operations across Splunk, Wazuh, and Kali Linux environments. Demonstrated ability to map attack patterns to MITRE ATT&CK, triage security alerts, and investigate log anomalies. Actively preparing for CompTIA Security+. Targeting SOC Analyst, Blue Team, Cybersecurity Intern, Security Analyst, and GRC roles.

TECHNICAL SKILLS

SIEM & SOC: Splunk (SPL) • Wazuh • Log Analysis • Alert Triage • Incident Response
Threat Intel: MITRE ATT&CK • Brute-Force Detection • Vulnerability Scanning • OSINT • OWASP
OS & Tools: Kali Linux • Windows • Git/GitHub • Jenkins (CI/CD) • Docker • Ngrok
Cloud & IAM: Azure Cloud Security • Zero Trust Architecture • RBAC • Token-Based Auth
Dev: Python • MERN Stack • React • SQL/MySQL • Node.js • MongoDB
Forensics: Cyber Forensics • Deepfake Detection (ViT) • Cryptography (AES/Shannon)

SOC & SECURITY PROJECTS

Threat Detection & MITRE ATT&CK Mapping - Kali Linux

- Simulated 6+ real-world attack techniques (SSH brute force, privilege escalation, credential theft) and mapped each to MITRE ATT&CK tactics and techniques
- Detected SSH brute-force patterns via journalctl log analysis; isolated authentication anomalies across 1,000+ log events
- Configured auditd to capture and analyze command execution activity; identified unauthorized /etc/shadow access indicating potential credential theft
- Implemented cron job monitoring to detect persistence mechanisms deployed by simulated adversaries

SIEM Dashboard & Security Monitoring - Splunk

- Engineered a Splunk SIEM environment ingesting Windows Event Logs; authored 10+ SPL queries to surface failed logins, privilege escalation events, and lateral movement indicators
- Designed 5 real-time dashboards visualizing brute-force attack patterns, privileged account anomalies, and suspicious access trends
- Reduced mean-time-to-detect (MTTD) simulated intrusions by correlating multi-source log data into unified alert views

SIEM-Based SOC Home Lab - Wazuh

- Architected a multi-VM SOC lab using Wazuh SIEM; deployed agents across 3 virtual machines to centralize log ingestion and real-time event correlation
- Simulated brute-force and privilege escalation attacks; analyzed 500+ alerts to classify true vs. false positives with documented incident reports
- Executed end-to-end alert lifecycle: log generation → ingestion → correlation → triage → documentation

Failed Login Geo-Mapper

- Developed a Blue Team log-analysis tool parsing SSH authentication logs to detect brute-force attacks
- Performed GeoIP lookups and plotted an interactive world attack map (Folium); mapped detections to MITRE ATT&CK (T1110.001)
- Generated an HTML dashboard, charts, CSV data, and a PDF security report from a single scan

Python Port Scanner

- Built a multi-threaded TCP port scanner (ThreadPoolExecutor) for fast network reconnaissance
- Implemented banner grabbing and service fingerprinting on open ports; exported CSV/JSON scan reports

Password Policy Compliance Checker

- Built a Python tool auditing passwords against a configurable organizational security policy (JSON-based rules)
- Scored password strength 0–100 and classified results as Weak / Medium / Strong; flagged common and reused passwords
- Generated CSV compliance reports and plain-text summaries for audit documentation

Linux Log Analysis & Brute-Force Attack Detection

- Executed controlled SSH brute-force simulation on Kali Linux VM; detected and documented all failed authentication attempts using journalctl
- Applied Linux CLI forensic techniques to extract IOCs and analyse login behaviour patterns from system logs

ACADEMIC PROJECTS

Zero Trust Architecture with Hybrid Cloud (Capstone Project)

- Engineered Zero Trust security model enforcing identity, device, and network-based access controls using Node.js, Express, and MongoDB
- Implemented RBAC authentication, JWT token security, and protected route enforcement; developed React dashboard to visualize security metrics and audit logs

ForensicAI – Deepfake Video Detection for Digital Evidence (R&D Project)

- Building Deep Learning model using Vision Transformer (ViT) to authenticate video evidence; evaluating cross-dataset generalization on unseen adversarial samples

ATDAM – Adaptive Threat Detection & Automated Mitigation (Research)

- Authored a cybersecurity research framework combining signature-based and anomaly-based detection to minimize attacker dwell time

SIMULATIONS & CERTIFICATIONS

Simulations

- TryHackMe SOC Simulation – alert triage, SIEM log investigation, true/false positive classification, structured case reporting
- Tata Consultancy Services (Forage) – IAM strategy assessment and security solution implementation
- Mastercard (Forage) – Security Awareness: phishing threat identification and analysis

Certifications

- Introduction to Cybersecurity – IBM SkillsBuild
- Endpoint Security – Cisco Networking Academy
- Cybersecurity Threat Management – Cisco Networking Academy

EDUCATION

B. Tech in Cybersecurity – NIIT University, Neemrana, Rajasthan *2023 – Present*

Higher Secondary Education (Class XII) – Somerville School, Vasundhara Enclave (CBSE) *2022 - 2023*

Secondary Education (Class X) – Somerville School, Vasundhara Enclave (CBSE) *2020 – 2021*

LEADERSHIP & EXTRACURRICULARS

- President, Agraga – Management Society, NIIT University (led 50+ member organization, managed college events)
- Social Media Head – Her Campus at NU (content strategy, community growth)
- Member, Student Affairs Committee (SAC) – Event Coordination & Student Welfare
